| :---: | :---: | :---: |
| 1 | VeeT | Transmitter Ground |
| 2 | TX Fault | Transmitter Fault Indication Logic Low indicates normal operation. Logic High Indicates a laser fault of some kind. TX Fault is an open drain output, which should be pulled up with a $4.7 \mathrm{~K}-10 \mathrm{~K} \Omega$ resistor on the host board. |
| 3 | TX Disable | Transmitter Disable Its states are : <br> Low (0-0.8V) : Transmitter on <br> ( $>0.8,<2.0 \mathrm{~V}$ ) : Undefined <br> High (2.0-3.465V) : Transmitter Disabled Open : Transmitter Disabled <br> It is pulled up within the module with a $4.7 \mathrm{~K}-10 \mathrm{~K} . \Omega$ resistor. |
| 4 | MOD-DEF2 | Module Definition 2 (SDA) <br> The data line of two wire serial interface for serial ID. <br> MOD-DEF2 should be pulled up with a $4.7 \mathrm{~K}-10 \mathrm{~K} \Omega$ resistor on the host board <br> The pull-up voltage shall be VccT or VccR. |
| 5 | MOD-DEF1 | Module Definition 1 (SCL) <br> The clock line of two wire serial interface for serial ID. <br> MOD-DEF1 should be pulled up with a $4.7 \mathrm{~K}-10 \mathrm{~K} \Omega$ resistor on the host board. <br> The pull-up voltage shall be VccT or VccR. |

| 12 | RD- | Inv. Received Data Out (Note 1) |
| 13 | RD+ | Received Data Out (Note 1) |
| 14 | VeeR | Receiver Ground |
| 15 | VccR | Receiver Power Supply |

| 18 | TD+ | Transmitter Data In (Note 2) |
| 19 | TD- | Inv. Transmit Data In (Note 2) |
| 20 | VeeT | Transmitter Ground |

Notes :

1. RD+ and RD- are AC coupled $100 \Omega$ differential lines which should be terminated with $100 \Omega$ (differential) at the user SERDES. The AC coupling is done inside the module and is thus not required on the host board. The voltage swing on these lines will be between 370 and 2000 mV differential ( $185-1000 \mathrm{mV}$ single ended) when properly terminated.
2. TD+ and TD- are AC-coupled, differential lines with $100 \Omega$ differential termination inside the module. The AC coupling is done inside the module and is thus not required on the host board. The inputs will accept differential swings of $500-2400 \mathrm{mV}$ ( $250-1200 \mathrm{mV}$ single-ended), though it is recommended that values between 500 and 1200 mV differential ( $250-600 \mathrm{mV}$ single-ended) be used for best EMI performance.
